SUMMARY

Full-stack developer building production systems across enterprise, government, and e-commerce. Core stack: C#/.NET 10, TypeScript across Angular and React, SQL Server. Currently the sole in-house developer on a veterinary continuing education platform with 192,000 registered users.

EXPERIENCE

Full Stack Developer

Kenilworth Media Inc. **July 2025 - Present, Toronto, Ontario**

- Sole in-house developer on VetMedTeam, a veterinary continuing education platform with 192,000 registered users; own the .NET 10 REST API end to end and contribute to the Angular 19 frontend.
- Lead the back-end admin API in a 61-ticket platform rebuild alongside an external agency; shipped 25 tickets in two months and designed the shared paging, search, sort and reorder conventions every admin endpoint uses.
- Caught pre-release defects including a nightly cleanup job that could delete paying members' accounts and concurrent retries creating duplicate PathLMS orders (fixed with an atomic database claim); proved each fix with a regression test.
- Built the commerce flow: idempotent checkout with replay detection, per-state sales tax and Authorize.Net payments; found checkout handling raw card data and moved capture to Accept.js tokenization, cutting PCI DSS scope.
- Integrated Auth0 (Management API, JWT policies) and PathLMS (REST, GraphQL) for SSO and automated course provisioning; wrote 600+ of the platform's 870+ xUnit tests and maintain the suite.
- Built the VetMedPlus+ membership site in Next.js 14 and TypeScript, SSO'd with VetMedTeam through a custom Auth0 membership-tier claim, plus an n8n and Azure OpenAI pipeline that relevance-scores about 200 veterinary articles weekly into personalized newsletters.

Independent Developer

E-Commerce Clients **December 2025 - Present, Toronto, Ontario**

- Built WooCommerce storefronts (B2B wholesale with tiered pricing, B2C retail) for two retained clients, with automated QuickBooks order sync and a Python pipeline for order reconciliation, sales reporting and server health monitoring.

Full Stack Developer Intern

Ontario Public Service (Ministry of Public and Business Service Delivery and Procurement) **May 2025 - August 2025, Toronto, Ontario**

- Led development of the GoCloud Cost Estimation application using React, TypeScript, and Cosmos DB, used by OPS DevOps engineers to generate 100+ monthly service estimates for Kubernetes clusters, VMs, and on-premises infrastructure.

IT Analyst / Developer Intern

Ontario Public Service (Ministry of Health) **May 2024 - August 2024, Toronto, Ontario**

- Engineered RESTful API integrations connecting enterprise communication systems with SQL Server databases, reducing manual ministry processes by 75% across 500+ staff.

EDUCATION

Advanced Diploma in Computer Programming and Analysis

Seneca Polytechnic • Toronto, Ontario • 2026

Double Major in Political Science and Philosophy

University of Toronto • Toronto, Ontario • 2023

SKILLS

Languages: C#, TypeScript, JavaScript, Python, SQL, PHP

Frontend: Angular 19, React, Next.js 14 (App Router), RxJS, Tailwind CSS, HTML, CSS

Backend: .NET 10, ASP.NET Core, Entity Framework Core, Hangfire, xUnit, Node.js, Express, FastAPI, RESTful APIs, GraphQL

Databases: SQL Server, PostgreSQL, Azure SQL, Cosmos DB

Cloud & DevOps: Git, Azure, Azure Container Apps, Docker, GitHub Actions, Azure DevOps, AWS, CI/CD, Linux VPS

Security & Auth: Auth0, JWT, OAuth2, SSO, PCI DSS (Accept.js tokenization)

Automation & AI: Azure OpenAI, n8n (self-hosted), Power Automate
